

SIMULATED RADIATION METERS

SERVICE OPTIONS

r a d i a t i o n t r a i n i n g s i m u l a t o r s

There are several service options available for your simulators: three one-price service options as well as standard time and materials service. The appeal of the one-price options is the alleviation of the normal paperwork involved the order for the actual service. These options are a simple solution for keeping your simulators in good working order.

Service Option A

This option is for customers who would like a general servicing of their equipment to verify good working order. We give the simulators a good once over and tweak the calibrations, recondition the batteries to eliminate memory build up (if possible) and guarantee the work for 30 days. We will also recommend any replacement parts needed. All of this for one fixed price.

- Test, clean and calibrate
- Recommend replacement parts
- Recondition batteries (replacement is extra)
- \$509/simulator

Service Option B

Option B is for customers with simulators in need of repair. Regardless of how the simulator was broken, we will fix it for a firm, fixed price. Again we give it a good once over and then we repair the simulator to place it in good working order with no extra charges.

- Test, tune, clean and calibrate
- Recondition batteries
- Replace **any** broken parts and place simulator in good working order
- \$949/simulator
- \$1,139/simulator with new batteries installed
- \$1,249/simulator with new batteries installed & new chargers

SIMULATOR SERVICE OPTIONS

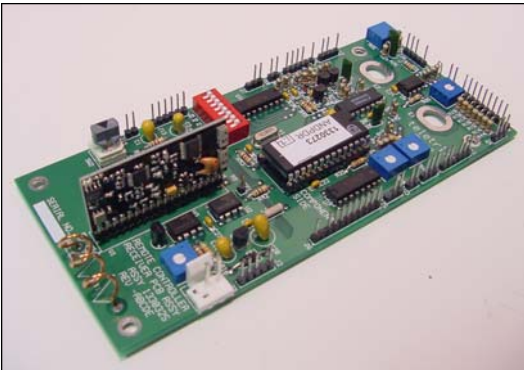

Service Option C

Simulators qualifying for our enhanced microprocessor upgrade will benefit from Option C. This combines the services listed in Option B along with the upgrading of the microprocessor and is only applicable to simulators produced after 1999 . Upgrading the microprocessor improves communications between the remote controller and simulator through enriched error processing in the data stream. An extremely value-packed option that meets many customer's needs.

- Test, tune, clean and calibrate
- Replace batteries
- Replace **any** broken parts and place simulator in good working order
- Upgrade simulator microprocessor
- \$1,469/simulator

Time and Materials Service

In the event you need a simulator repaired and none of the above options fit your needs, we will perform a bench test of the simulator to troubleshoot the problem and give you a firm quote of the repairs with a parts and labor breakdown. If you should go with the repairs as quoted, there is no charge for the bench test. If you should not opt for the repairs at that time, the charge is \$199 for the bench test.
